What's Coming + Q&A

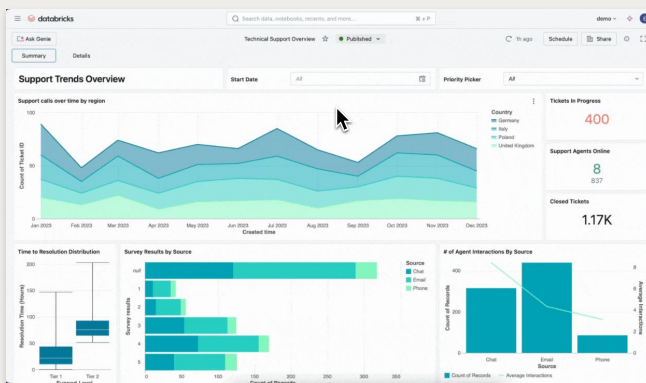

What is AI/BI Genie?

Databricks AI/BI

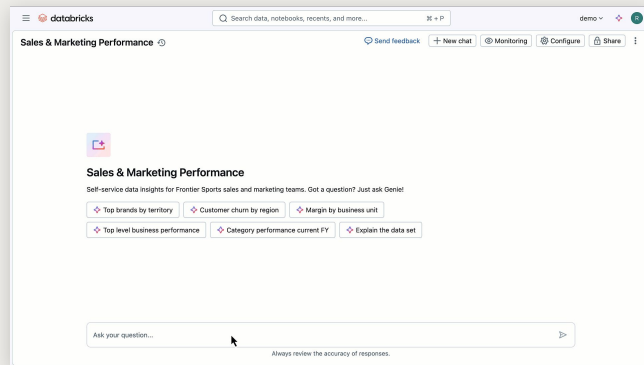

Intelligent analytics
for everyone

Powered by Databricks SQL

Dashboards

Fast and secure
visual insights for your
entire organization

Genie

Talk with your data
using natural
language

Governed and secured with Unity Catalog

AI/BI Genie

Talk with your data

Conversational analytics

Ask questions in natural language and get answers immediately

AI tailored to your business

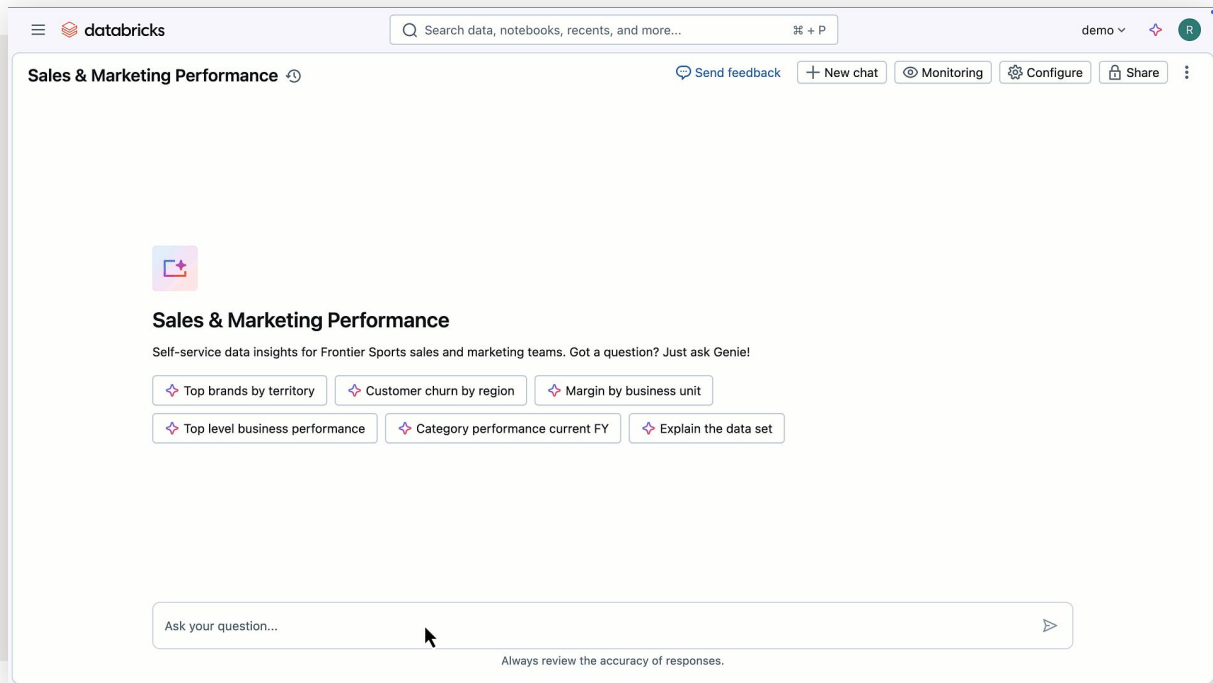

Genie incorporates unique context for your data from the broader platform

Governed and secure

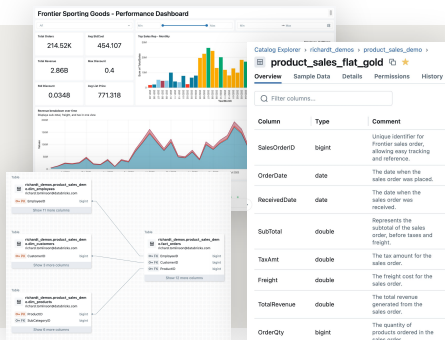

Fully governed data, with results secured by your Unity Catalog policies

Accessible anywhere

Embed in custom apps via APIs, pair with AI/BI Dashboards

Tailor Genie for **your data and business**

Leverage context from platform metadata

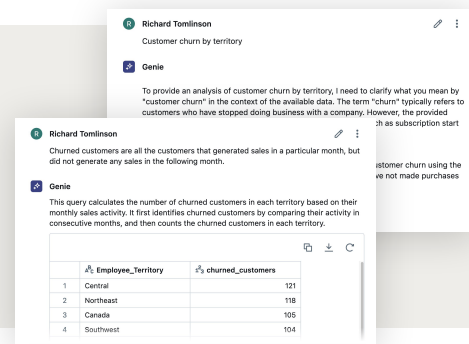

Pick concise topics; Genie learns from existing metadata from the Databricks platform

The screenshot shows the 'SQL queries & functions' interface in Genie. It lists several queries with their names and types.

Name	Type
what were the biggest closed deals in X and who were th	Query
which sales reps converted open opportunities to closed	Query
which mid market accounts have generated the most sal	Query
who are my most active sales reps in 2024	Query
Which industries have the highest win rates?	Query
what is the conversation rate of all accounts	Query
dataroom_sample_views.foo.bar.shared_views.open_op	Function

Enrich understanding with space-level semantics

Authors can fine tune each Genie Space via example SQL, text instructions, etc

Iterate based on user feedback

End user feedback tracked in the Monitoring, evaluate your spaces with Benchmarks

“Executives can instantly find out how Game X is selling in China over the last three months compared to the year prior, and immediately get actionable insights without waiting for interdepartmental emails”

— Francis Hart, VP of Data and AI, SEGA

“Genie is changing how we empower teams at HP. With its intuitive natural language interface, we’re enabling users to instantly access critical data, no coding required, making data-driven insights faster and more efficiently.”

**— Bruce Hillsberg, VP, Data Engineering and Insights,
HP**

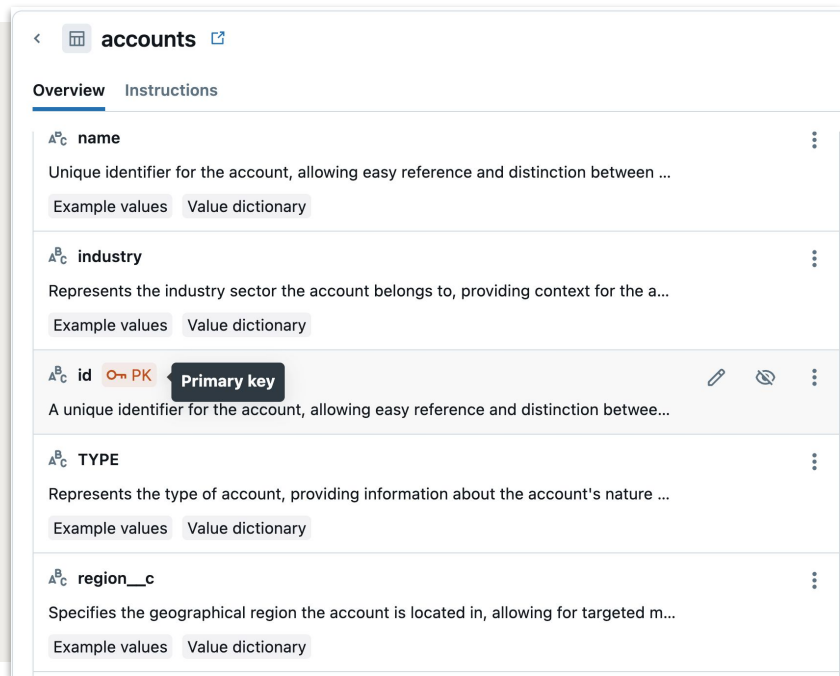

Best practices for curating a space

Start with focused, documented data

Table metadata is the most effective context

The screenshot shows a data catalog interface for a table named 'accounts'. The interface has a header with a back arrow, a table icon, the name 'accounts', and a link icon. Below the header are two tabs: 'Overview' (selected) and 'Instructions'. The table metadata is displayed in a list of rows, each with a column name, a description, and example values. The 'id' column is highlighted as the primary key.

accounts	
name	Unique identifier for the account, allowing easy reference and distinction between ... Example values Value dictionary
industry	Represents the industry sector the account belongs to, providing context for the a... Example values Value dictionary
id	Primary key A unique identifier for the account, allowing easy reference and distinction between...
TYPE	Represents the type of account, providing information about the account's nature ... Example values Value dictionary
region__c	Specifies the geographical region the account is located in, allowing for targeted m... Example values Value dictionary

Focused Datasets

Focused and non-conflicting datasets is key to Genie's ability to generate accurate SQL

Leverages Unity Catalog Metadata

Table/column descriptions, Primary/Foreign Key relationships, column stats **NEW!**, example values **NEW!**

NEW! Value Dictionaries

Genie maps misphrased or alternative prompt values to the correct data values to return accurate results

Next, teach Genie SQL logic

Example SQL Queries

Example SQL is applied dynamically to guide Genie on relevant user prompts

Add a natural language question that reflects what a business user would ask

NEW! Data Intelligence Platform will now suggest popular queries to authors

Review Suggested Queries

Review each suggested query, then accept or reject it. For each accepted query, provide a question-style title that describes what the query answers. Accepted queries will be included in your room instructions.

^ Filtered usage data for MODEL_SERVING

✓ Accept ✗ Reject

Title

Enter a question that best describes what this query answers (e.g., 'What is the revenue for this year?')

What is the usage data for MODEL_SERVING with specific filters?

Code

```
SELECT
*
from
system.billing.usage
WHERE
billing_origin_product = "MODEL_SERVING"
```

... 4 more lines

Source

SQL Query

▼ Usage statistics for LAKEFLOW_CONNECT

✓ Accept ✗ Reject

▼ Usage data for MODEL_SERVING with warehouse ID

✓ Accept ✗ Reject

10

Finally, add General Instructions

ONLY add when example SQL or table metadata isn't possible

Do's

✓ Teach Genie when to ask clarifications

Help Genie understand when user prompts are missing necessary context

✓ Add formatting instructions

Teach Genie how to format numeric results, which language to respond in, or how many rows to include

✓ Concise and direct

Text should be phrased as explicit directions "When the user... make sure to...", "Always include..."

✓ Organize as a list

Use dashes/asterisks to make instructions easier for collaboration and for Genie to understand

Don'ts

✗ Don't overload text

Text isn't filtered by prompt; this uses context space and makes conflicting context more likely

✗ Avoid conflicting instructions

Like telling a new data analyst two ways to answer the same question—it'll confuse the LLM

✗ Don't enumerate column values

This wastes context space; value dictionaries and example values are more effective

✗ Don't add SQL logic as text

Prioritize Example SQL and SQL Primitives (COMING!) to teach Genie SQL logic

Introducing Knowledge Store

We heard curating Genie was challenging because...

Lack of Permissions – users often didn't have access to update table metadata or to join data into Materialized Views

Clarity of Instructions – users often added conflicting, overloaded text instructions that confused Genie

Introducing Knowledge Store

Edit Metadata Locally – users can now modify local versions of table metadata within their Genie space

New Instruction Types – a set of structured, fine-grained instruction formats for authors

NEW!

Knowledge Store: Local Data Prep

NEW! Hide Columns

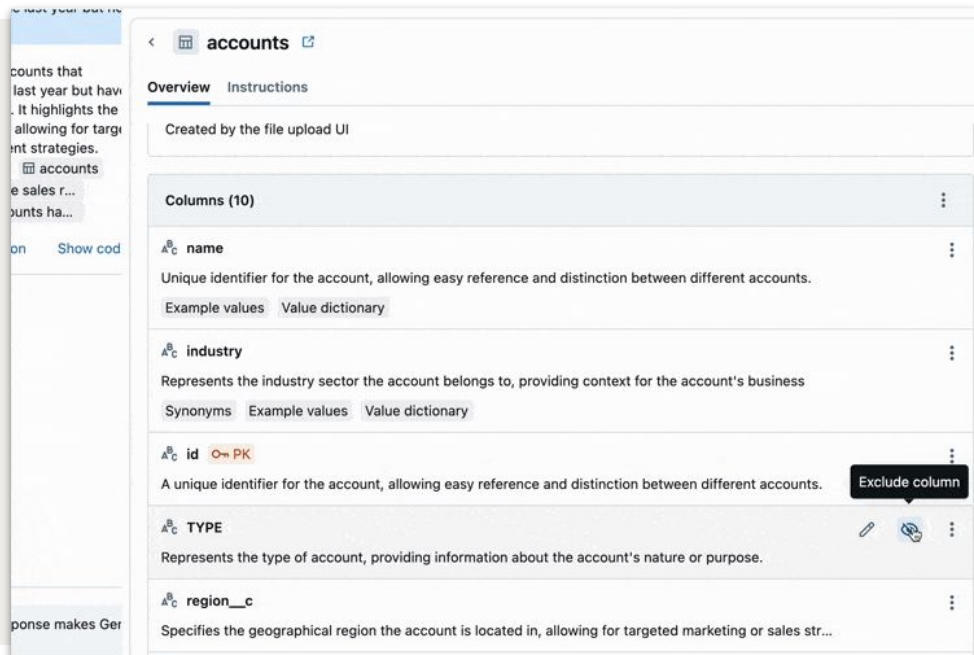

Hide unnecessary/conflicting columns from Genie without needing to create new Materialized Views

NEW! Edit Table + Column Descriptions Locally

Local table/column descriptions enable quick iteration within a Genie space

NEW! Add Column Synonyms

Column names are often cryptic – natural language references help Genie understand them

Knowledge Store: Table Relationships

Define join relationship ×

Left Table

accounts ▼

ⓘ Alias: **accounts**

Right Table

opportunity ▼

ⓘ Alias: **opportunity**

Join condition

accounts.id = opportunity.accountid

Join Type

INNER ▼

Cancel

Save

Leverages PK/FK Definitions

Genie automatically uses Primary Key/Foreign Key relationships defined on Unity Catalog assets

Define JOINS Locally

If you can't add Primary/Foreign Keys, or the table relationships are complex, define them in Genie

Suggested JOIN Relationships

Based on your previous queries and notebooks, Genie will suggest JOIN relationships

NEW!

Knowledge Store: SQL Expressions

Intuitive Authoring

Structured inputs guide authors to add clearer, more complete context

Denser Context

SQL expressions capture business context more efficiently and use less context space

Enhances Genie's RAG

Structured inputs replaces general text, enabling more selective context per prompt

New calculated measure

MEASURE ×

Name
A logical name for referring to this measure.

Code
A SQL expression using aggregation functions to calculate a measure across multiple rows from this table.

Enter a SQL expression.

Synonyms
Add common ways, separated by commas, of referring to this measure in natural, colloquial language.

Instructions
Add specific instructions to this column.

What should this column do? How should it behave? What should it avoid doing?

Cancel Save

Suggested Instructions

The screenshot shows the Databricks Genie interface within the 'Prod Sales Opportunity Space'. A search bar at the top contains the query 'show me TGS in emea for FY2025'. Below the search bar, a text box explains the query: 'Manually edited This query retrieves the list of users from the EMEA region who are associated with the fiscal year 2025. The data is compiled by filtering the teams based on their region and matching it with the relevant fiscal period. big_rock_opportunity accounts'. A table with one row and two columns is displayed, showing '1.2 total_sales' and '3,244,761.4'. Below the table, a feedback prompt asks 'Is this correct? Your response makes Genie better over time.' with buttons for 'Yes', 'Fix it', and 'Request review'. At the bottom, there are three suggested queries: 'What are the sales opportunities in EMEA for FY2025?', 'How many accounts are there in EMEA for FY2025?', and 'What is the...'. A 'Deep Research' button is also present.

Best practices for managing a space

Genie Rollout Plan

Self-Validation

Identify 10–20 key business questions and teach Genie to answer them accurately

Test Genie on ad-hoc questions yourself as they come and adjust instructions as needed

Staged Rollout

Stage the rollout to a small group of trusted users first and slowly expand to more

Guide users on what to ask (pair w/ dashboards, starter questions, guides). Follow API best practices.

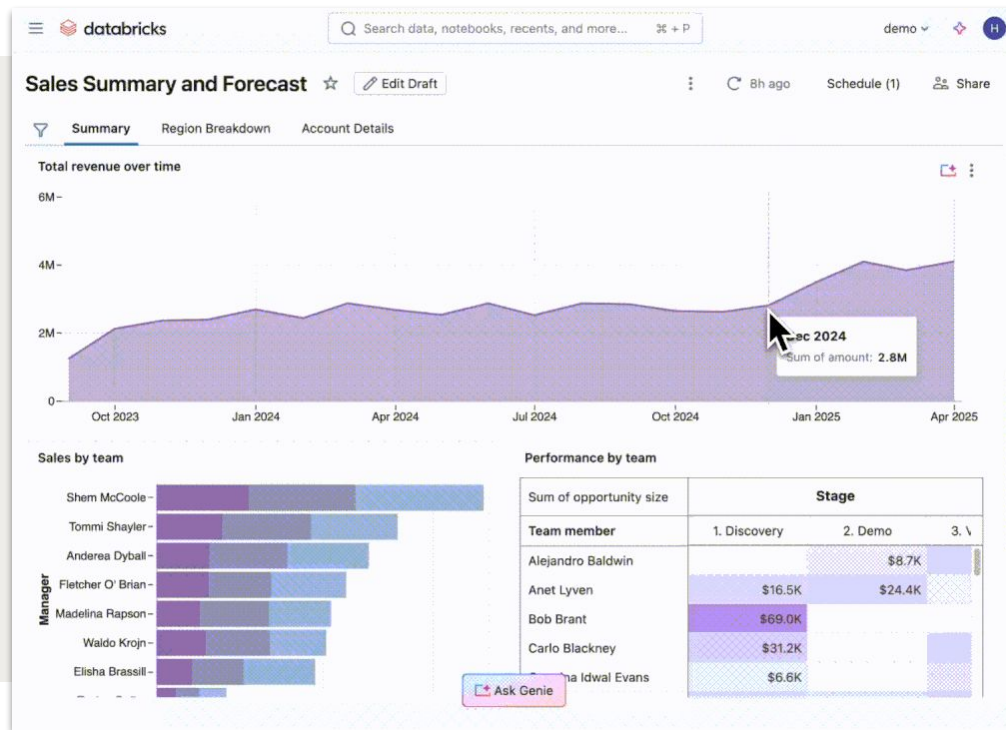

Ongoing Iteration

Track user prompts and feedback via the Monitoring tab and Genie Audit Logs

Add questions to benchmarks, improve Genie context, rerun benchmarks, repeat

Pair Genie with Dashboards

Guide Business Users

Dashboards provide business users with context on the available data and KPIs for ad-hoc analysis

Directly Ask Follow Ups

Users can select specific dashboard charts and ask follow up questions to Genie

NEW! Uncover "Why"

Top drivers give explain why an observed increase/decrease happened

Manage User Feedback

Monitoring Tab

Track usage and feedback to guide improvements. Thumbs up/down don't auto-update the space; authors review first.

Genie Audit Logs

Set up [Alerts](#) to trigger email notifications on specific actions (request review, thumbs down, etc)

Continuous Improvement

Add new questions to Benchmarks, improve Genie context, rerun Benchmarks, repeat

Conversation APIs Best Practices

- **Implement request queuing:** Avoid exceeding throughput limits with a queuing system, as the API doesn't manage request retries.
- **Poll for status updates every 5–10 seconds:** Continue polling until a conclusive message status (COMPLETED, FAILED, or CANCELLED). Limit polling to 10 minutes for most queries.
- **Use exponential backoff after 2 minutes:** If no response is received within 2 minutes, apply exponential backoff to improve reliability.
- **Start a new conversation for each session:** Avoid reusing conversation threads across sessions, as this can reduce accuracy due to unintended context reuse.

Genie incorporates unique context for your data from the broader platform

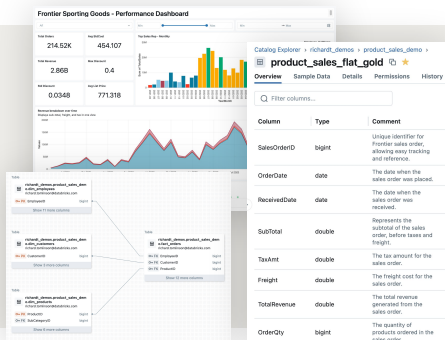

Governed and secure

Fully governed data, with results secured by your Unity Catalog policies

Accessible anywhere

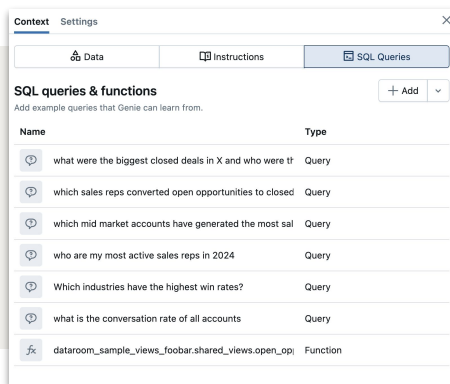

Embed in custom apps via APIs, pair with AI/BI Dashboards

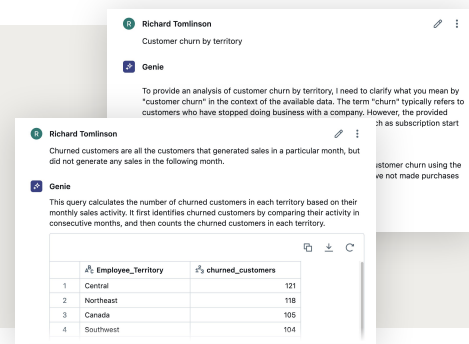

Leverage context from platform metadata

Pick concise topics; Genie learns from existing metadata from the Databricks platform

Enrich understanding with space-level semantics

Authors can fine tune each Genie Space via example SQL, text instructions, etc

Iterate based on user feedback

End user feedback tracked in the Monitoring, evaluate your spaces with Benchmarks

“Executives can instantly find out how Game X is selling in China over the last three months compared to the year prior, and immediately get actionable insights without waiting for interdepartmental emails”

— Francis Hart, VP of Data and AI, SEGA

“Genie is changing how we empower teams at HP. With its intuitive natural language interface, we’re enabling users to instantly access critical data, no coding required, making data-driven insights faster and more efficiently.”

**— Bruce Hillsberg, VP, Data Engineering and Insights,
HP**

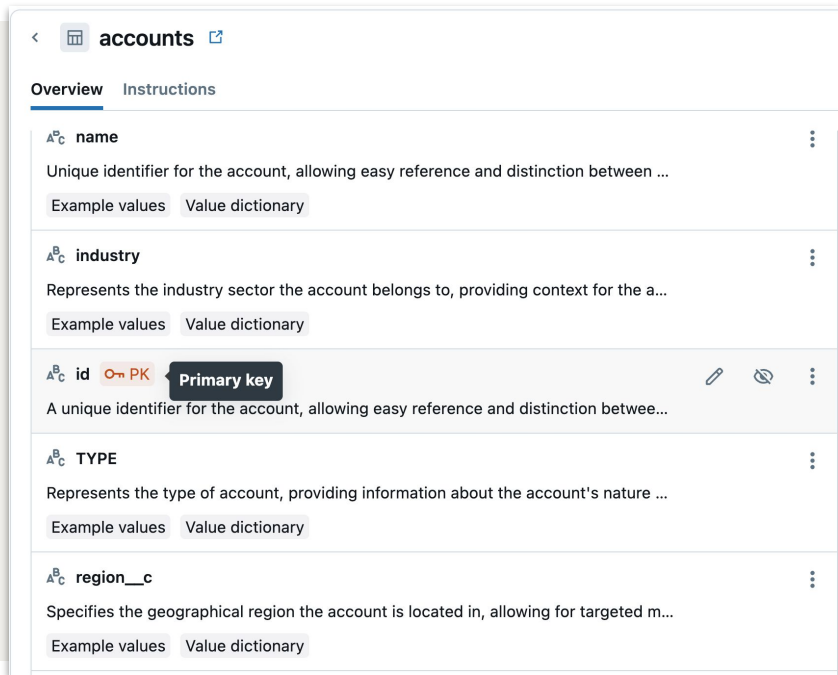

Best practices for curating a space

Start with focused, documented data

Table metadata is the most effective context

The screenshot shows a data catalog interface for a table named 'accounts'. The interface has a header with a back arrow, a table icon, the name 'accounts', and a link icon. Below the header are two tabs: 'Overview' (selected) and 'Instructions'. The table metadata is displayed in a list of rows, each with a column name, a description, and a 'Value dictionary' link. The 'id' column is highlighted as the primary key.

accounts	
name	Unique identifier for the account, allowing easy reference and distinction between ...
industry	Represents the industry sector the account belongs to, providing context for the a...
id	A unique identifier for the account, allowing easy reference and distinction between...
TYPE	Represents the type of account, providing information about the account's nature ...
region__c	Specifies the geographical region the account is located in, allowing for targeted m...

Focused Datasets

Focused and non-conflicting datasets is key to Genie's ability to generate accurate SQL

Leverages Unity Catalog Metadata

Table/column descriptions, Primary/Foreign Key relationships, column stats **NEW!**, example values **NEW!**

NEW! Value Dictionaries

Genie maps misphrased or alternative prompt values to the correct data values to return accurate results

Next, teach Genie SQL logic

Example SQL Queries

Example SQL is applied dynamically to guide Genie on relevant user prompts

Add a natural language question that reflects what a business user would ask

NEW! Data Intelligence Platform will now suggest popular queries to authors

Review Suggested Queries

Review each suggested query, then accept or reject it. For each accepted query, provide a question-style title that describes what the query answers. Accepted queries will be included in your room instructions.

^ Filtered usage data for MODEL_SERVING

✓ Accept ✗ Reject

Title

Enter a question that best describes what this query answers (e.g., 'What is the revenue for this year?')

Code

```
SELECT
*
from
system.billing.usage
WHERE
billing_origin_product = "MODEL_SERVING"
```

... 4 more lines

Source

SQL Query

▼ Usage statistics for LAKEFLOW_CONNECT

✓ Accept ✗ Reject

▼ Usage data for MODEL_SERVING with warehouse ID

✓ Accept ✗ Reject

42

Finally, add General Instructions

ONLY add when example SQL or table metadata isn't possible

Do's

✓ Teach Genie when to ask clarifications

Help Genie understand when user prompts are missing necessary context

✓ Add formatting instructions

Teach Genie how to format numeric results, which language to respond in, or how many rows to include

✓ Concise and direct

Text should be phrased as explicit directions "When the user... make sure to...", "Always include..."

✓ Organize as a list

Use dashes/asterisks to make instructions easier for collaboration and for Genie to understand

Don'ts

✗ Don't overload text

Text isn't filtered by prompt; this uses context space and makes conflicting context more likely

✗ Avoid conflicting instructions

Like telling a new data analyst two ways to answer the same question—it'll confuse the LLM

✗ Don't enumerate column values

This wastes context space; value dictionaries and example values are more effective

✗ Don't add SQL logic as text

Prioritize Example SQL and SQL Primitives (COMING!) to teach Genie SQL logic

Introducing Knowledge Store

We heard curating Genie was challenging because...

Lack of Permissions – users often didn't have access to update table metadata or to join data into Materialized Views

Clarity of Instructions – users often added conflicting, overloaded text instructions that confused Genie

Introducing Knowledge Store

Edit Metadata Locally – users can now modify local versions of table metadata within their Genie space

New Instruction Types – a set of structured, fine-grained instruction formats for authors

NEW!

Knowledge Store: Local Data Prep

NEW! Hide Columns

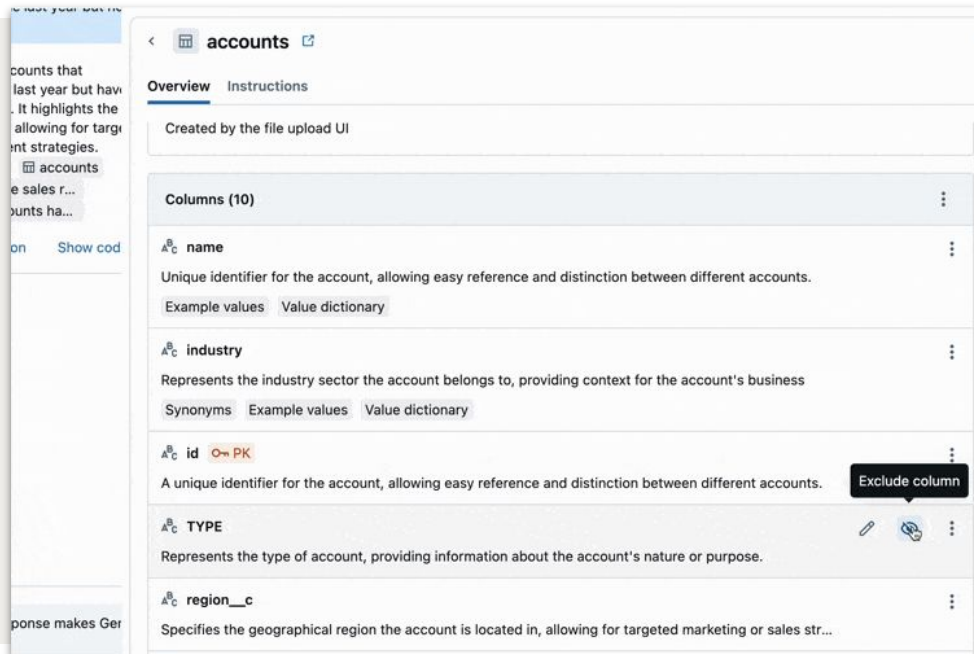

Hide unnecessary/conflicting columns from Genie without needing to create new Materialized Views

NEW! Edit Table + Column Descriptions Locally

Local table/column descriptions enable quick iteration and work around permission limits

NEW! Add Column Synonyms

Column names are often cryptic – natural language references help Genie understand them

Knowledge Store: Table Relationships

Define join relationship

Left Table

accounts

ⓘ Alias: **accounts**

Right Table

opportunity

ⓘ Alias: **opportunity**

Join condition

accounts.id = opportunity.accountid

Join Type

INNER

Cancel

Save

Leverages PK/FK Definitions

Genie automatically uses Primary Key/Foreign Key relationships defined on Unity Catalog assets

COMING! Define JOINS Locally

If you can't add Primary/Foreign Keys, or the table relationships are complex, define them in Genie

COMING! Suggested JOIN Relationships

Based on your previous queries and notebooks, Genie will suggest JOIN relationships

COMING!

Knowledge Store: SQL Expressions

Intuitive Authoring

Structured inputs guide authors to add clearer, more complete context

Denser Context

SQL expressions capture business context more efficiently and use less context space

Enhances Genie's RAG

Structured inputs replaces general text, enabling more selective context per prompt

New calculated measure MEASURE X

Name
A logical name for referring to this measure.

Code
A SQL expression using aggregation functions to calculate a measure across multiple rows from this table.

Synonyms
Add common ways, separated by commas, of referring to this measure in natural, colloquial language.

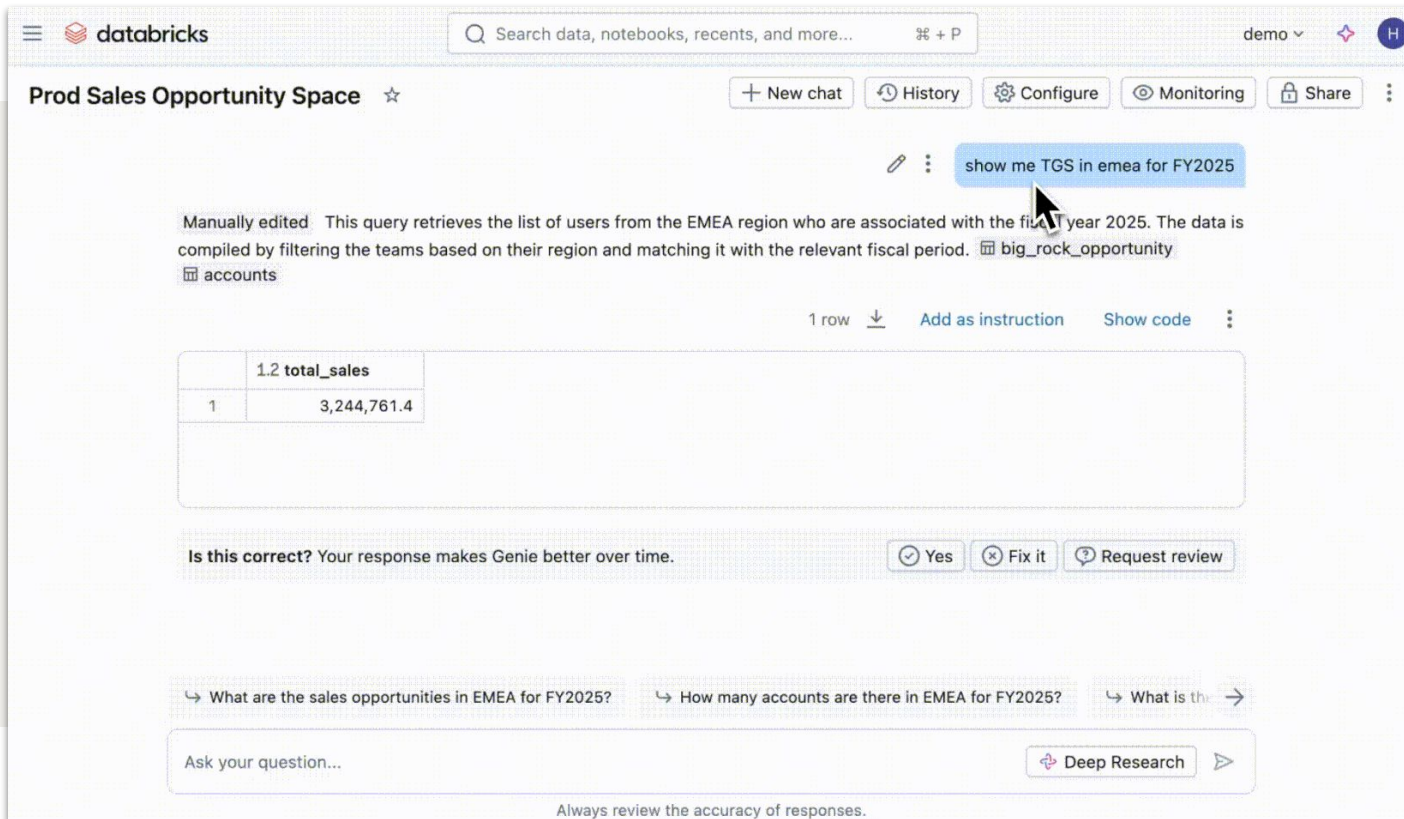

Instructions
Add specific instructions to this column.

Cancel Save

COMING!

Suggested Instructions

The screenshot shows the Databricks Genie interface within the "Prod Sales Opportunity Space". At the top, there's a search bar and navigation links like "New chat", "History", "Configure", "Monitoring", and "Share". A chat input field contains the prompt "show me TGS in emea for FY2025". Below this, a "Manually edited" note explains the query's purpose: retrieving users from the EMEA region for FY2025, filtered by team and fiscal period, using tables "big_rock_opportunity" and "accounts". A table with one row of data is displayed, showing a total sales value of 3,244,761.4. Below the table, a feedback prompt asks "Is this correct? Your response makes Genie better over time." with buttons for "Yes", "Fix it", and "Request review". At the bottom, there are suggested follow-up questions and a "Deep Research" button.

Best practices for managing a space

Genie Rollout Plan

Self-Validation

Identify 10–20 key business questions and teach Genie to answer them accurately

Test Genie on ad-hoc questions yourself as they come and adjust instructions as needed

Staged Rollout

Stage the rollout to a small group of trusted users first and slowly expand to more

Guide users on what to ask (pair w/ dashboards, starter questions, guides). Follow API best practices.

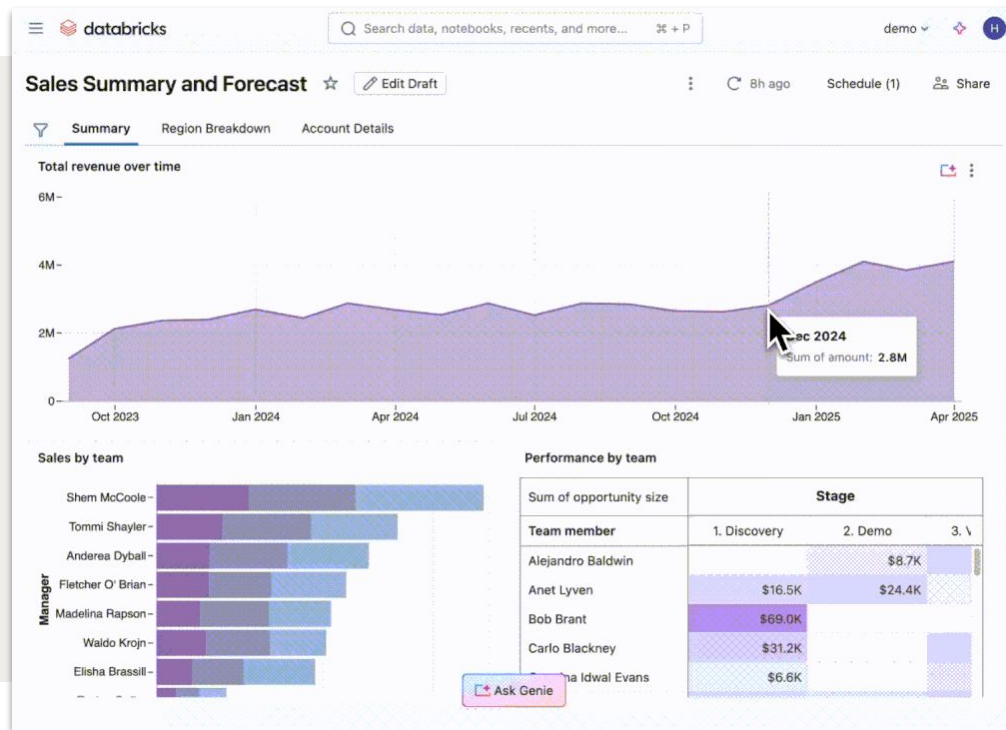

Ongoing Iteration

Track user prompts and feedback via the Monitoring tab and Genie Audit Logs

Add questions to benchmarks, improve Genie context, rerun benchmarks, repeat

Pair Genie with Dashboards

Guide Business Users

Dashboards provide business users with context on the available data and KPIs for ad-hoc analysis

Directly Ask Follow Ups

Users can select specific dashboard charts and ask follow up questions to Genie

NEW! Uncover "Why"

Top drivers give explain why an observed increase/decrease happened

Manage User Feedback

Sales Genie ☆ > **Monitoring** + New chat History Configure Monitoring Share ⋮

History of the activities within your space. Understand the errors, feedback, and results the space is returning.

Monitoring Tab

Track usage and feedback to guide improvements. Thumbs up/down don't auto-update the space; authors review first.

Genie Audit Logs

Set up [Alerts](#) to trigger email notifications on specific actions (request review, thumbs down, etc)

Continuous Improvement

Add new questions to Benchmarks, improve Genie context, rerun Benchmarks, repeat

Conversation APIs Best Practices

- **Implement request queuing:** Avoid exceeding throughput limits with a queuing system, as the API doesn't manage request retries.
- **Poll for status updates every 5–10 seconds:** Continue polling until a conclusive message status (COMPLETED, FAILED, or CANCELLED). Limit polling to 10 minutes for most queries.
- **Use exponential backoff after 2 minutes:** If no response is received within 2 minutes, apply exponential backoff to improve reliability.
- **Start a new conversation for each session:** Avoid reusing conversation threads across sessions, as this can reduce accuracy due to unintended context reuse.

Live Demo

Demo Summary

- Demo Outline:

<https://docs.google.com/document/d/1FODUh5c68zD8h-K29XNO3eMGxhUnHixYBXSl9uwG88/edit?tab=t.0>

What's Coming Next?

Roadmap Investments

1

Answer Quality

- SQL Expression Primitives
- Suggested Instructions
- Value Dictionaries – GA
- Clarification question behavior
- Improved auto-viz quality
- Improved latency

2

Productionalization

- Conversations API – GA
- CRUD operation APIs
- Monitoring via System Table/API
- Genie Agent Wrapper
- Export/Import
- Draft/Publish mode

3

Consumer Usability

- Improved answer explanations
- Editable filter dropdowns
- Trust/confidence labels
- Visualizations via API
- Thumbs Up/Down via API
- Genie deep research

Q&A

Databricks–Led Breakout Sessions

Session Title (Link Included)	Speakers	Schedule
Deliver Data Where It's Needed: Scale AI/BI Dashboards for Enterprise Reporting	Eason Gao, Patrick Yang	Tuesday, Jun 10 3:00 PM – 3:40 PM PDT
Turn Genie Into an Agent Using Conversation APIs	Hanlin Sun, Prithvi Kannan	Tuesday, Jun 10 5:20 PM – 6:00 PM PDT
Streamline Your BI Infrastructure With Databricks AI/BI and Save Millions on Traditional BI Tools	Arpit Agrawal	Wednesday, Jun 11 11:30 AM – 11:50 AM PDT
Retail Genie: No-Code AI Apps for Empowering BI Users to be Self-Sufficient	Harish Rajagopalan, Siddhesh Pore	Wednesday, Jun 11 11:30 AM – 12:10 PM PDT
Driving Trusted Insights With AI/BI and Unity Catalog Metric Views	Fuat Can Efeoglu	Wednesday, Jun 11 12:20 PM – 12:40 PM PDT
How We Turned 200+ Business Users Into Analysts With AI/BI Genie	Thomas Russell	Wednesday, Jun 11 12:40 PM – 1:20 PM PDT
Take it to the Limit: Art of the Possible in AI/BI	Adam Levine, Noah Sommerfeld	Wednesday, Jun 11 1:50 PM – 2:30 PM PDT
Supercharge Your Enterprise BI: A Practitioner's Guide for Migrating to AI/BI	Aman Gupta, Romit Jadhvani	Wednesday, Jun 11 3:00 PM – 3:40 PM PDT
Unifying GTM Analytics: The Strategic Shift to Native Analytics and AI/BI Dashboards at Databricks	Abhinav Bhatnagar, David Gojo	Wednesday, Jun 11 3:00 PM – 3:40 PM PDT

Databricks-Led Breakout Sessions (Cont'd)

Session Title (Link Included)	Speakers	Schedule
Bridging BI Tools: Deep Dive Into AI/BI Dashboards for Power BI Practitioners	Marius-Cristian Panga, Wasim Ahmad	Wednesday, Jun 11 5:20 PM – 6:00 PM PDT
AI/BI Genie: A Look Under the Hood of Everyone's Friendly, Neighborhood GenAI Product	Alnur Ali, Amir Hormati	Wednesday, Jun 11 5:20 PM – 6:00 PM PDT
What's New and What's Next: Building Impactful AI/BI Dashboards	Eason Gao, Rory Jacobs	Thursday, Jun 12 12:30 PM – 1:10 PM PDT
Scaling AI/BI Genie: Best Practices for Curating and Managing Production Spaces	Hanlin Sun, Shah Amini	Thursday, Jun 12 12:30 PM – 1:10 PM PDT
Latest Innovations in AI/BI Dashboards and Genie	Chao Cai, Miranda Luna	Thursday, Jun 12 1:40 PM – 2:20 PM PDT
Securely Deploying AI/BI to All Users in Your Enterprise	Austin Green, Keegan Dubbs	Thursday, Jun 12 1:40 PM – 2:20 PM PDT

Customer Breakout Sessions

Session Title (Link Included)	Speakers	Schedule
AI/BI Driving Speed to Value in Supply Chain	Adrian McClure (Conagra Brands), Heather Cooley (Conagra Brands)	Tuesday, Jun 10 9:10 AM – 9:50 AM PDT
Getting Data AI Ready: Testimonial of Good Governance Practices Constructing Accurate Genie Spaces	Arvindram Krishnamoorthy (T-Mobile) Brian Schober (T-Mobile)	Tuesday, Jun 10 11:30 AM – 12:10 PM PDT
AI/BI Dashboards and AI/BI Genie: Dashboards and Last-Mile Analytics Made Simple	Youssef Mrini (Databricks), Josue Bogran (zeb.co)	Tuesday, Jun 10 10:20 AM – 11:00 AM PDT
Genie for Engineering: Optimizing HVAC Design and Operational Insights With Data and AI	Mohamed Hanif Ansari (Lennox) Sridhar Venkatesh (Lennox)	Tuesday, Jun 10 3:00 PM – 3:40 PM PDT
You Mean I Can Talk to My Data? Reimagining How KPMG Engages Data Using AI BI Genie	Dennis Tally (KPMG)	Tuesday, Jun 10 11:30 AM – 11:50 AM PDT
AI and Genie: Analyzing Healthcare Improvement Opportunities	Jay Sharma (Premier Inc) Tim Riddle (Premier Inc)	Tuesday, Jun 10 11:30 AM – 12:10 PM PDT
Building Dashboards as a Production-Grade Data Product	Caleb Priester (Zillow)	Tuesday, Jun 10 12:40 PM – 1:20 PM PDT

Customer Breakout Sessions (Cont'd)

Session Title (Link Included)	Speakers	Schedule
Unified Advanced Analytics: Integrating Power BI and Databricks Genie for Real-time Insights	Edelweiss Kammermann (IT Convergence) Justin Ward (TurnPoint Services)	Tuesday, Jun 10 4:10 PM – 4:50 PM PDT
Maximize Retail Data Insights in Genie with DeltaSharing via Crisp's Collaborative Commerce Platform	Julienne Biglin (Crisp)	Tuesday, Jun 10 5:20 PM – 5:40 PM PDT
Empowering Business Users With Databricks – Integrating AI/BI Genie With Microsoft Teams	Nathan Sundararajan/Rooms To Go Ryan Bates/Databricks	Tuesday, Jun 10 5:20 PM – 6:00 PM PDT
Your Wish is AI Command – Get to Grips With Databricks Genie	Simon Whiteley (Advancing Analytics)	Wednesday, Jun 11 11:30 AM – 12:10 PM PDT
Tech Industry Session: Optimizing Costs and Controls to Democratize Data and AI	Vivek Srivastava (OT Technology, LLC) Miranda Luna (Databricks) Anup Segu (YipitData)	Wednesday, Jun 11 12:40 PM – 1:20 PM PDT
Embracing Unity Catalog and Empowering Innovation With Genie Room	Junghoon Lee (Bagelcode) Soochang Chung (Bagelcode)	Wednesday, Jun 11 5:20 PM – 6:00 PM PDT
AI/BI Genie & Dashboards: Talk With Your Data With GenAI Powered Business Intelligence	Richard Tomlinson (Databricks), Tim Riddle (Premier)	Thursday, Jun 12 1:10 PM – 1:25 PM PDT
